Nick,

Yep, of course I got it working a few mins after emailing you. The website backend ended up being the solution after-all. Something else must have been breaking our API calls when I tried that prior. Thank you so much for helping me out through this process, all is working well now!

Billy

Hi Billy,

Did you end up figuring this redirect out? It seems to be redirecting now, but sorry this wasn't more obvious.

The rewrites and sub-URL settings you see in the API backends are for transforming the URL before it hits your servers, but don't actually perform HTTP redirects. We can setup HTTP redirects on our end, but that's not something that's currently exposed through the admin UI. Alternatively, you can also configure your API backend to perform a redirect, although you'll then probably need to disable API keys for that specific endpoint.

Anyway, definitely feel free to reach out if you still haven't gotten this setup, or you would prefer that we handle the redirect on our end, and we can get that setup for you shortly. I'll also see about adding something about this to our admin guide.

Thanks,
Nick

Nick,

We have sort of gone live with developer.nps.gov going through api.data.gov (previously this was api.nps.gov). Normal API calls work but I have tried to create that redirect so that if someone just goes to https://developer.nps.gov/ they get redirected to https://www.nps.gov/subjects/developer/index.htm. I've tried using a Sub-URL or Advanced Rewrite in the umbrella portal that would at least throw the request down to our backend (where can can do a redirect), but none of those worked. (Creating a Website Backend broke our API calls so that doesn't seem viable either). Any help is appreciated!

Thanks,
Billy

Hi Billy,

Sorry this slipped past me earlier!

Regarding the CNAME, if you plan to use developer.nps.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fdeveloper.nps.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=KgAOAe3M8Kt7CXWthYD5iZpbjMz8ZfZmCDjh9SAaNXk%3D&reserved=0><http://developer.nps.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fdeveloper.nps.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=KgAOAe3M8Kt7CXWthYD5iZpbjMz8ZfZmCDjh9SAaNXk%3D&reserved=0>> for production, then yes, we'll want to tweak things slightly. I've gone ahead and updated our system so we can handle SSL for that domain, and you should now have permissions in the admin to create API backends under that domain. For the CNAME, please use "developer-nps-gov.domains.api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fdeveloper-nps-gov.domains.api.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=dYYivBCK2HLMAX6OW9m8F%2Fw5%2FwcCm2WOr%2F%2BFp5XBmvk%3D&reserved=0><http://developer-nps-gov.domains.api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fdeveloper-nps-gov.domains.api.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=dYYivBCK2HLMAX6OW9m8F%2Fw5%2FwcCm2WOr%2F%2BFp5XBmvk%3D&reserved=0>>".

For the IP addresses, one thing to be aware of this that our IP addresses may change sometime in the next year. We'll be sure give you plenty of notice of our new IP addresses, but you may also consider other approaches to securing your API backend that aren't reliant on our IPs: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#securing-your-api-backend<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgithub.com%2F18F%2Fapi.data.gov%2Fwiki%2FUser-Manual%3A-Agencies%23securing-your-api-backend&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=o1uGe1OdThcbSQb9UN31k%2BrAYisD0HxF8e6hKx5unxc%3D&reserved=0> But if you'd like to use IP-based restrictions, that's fine too, and our current IPs are 54.208.160.112 and 54.208.160.151.

Regarding the redirect, I'm not sure I fully understand the question. If you're asking about the "Website Backend" functionality in the api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=zdr5qxK5qpf1eQnAgeLmEPExPqBXf73sZq%2F3uaJHSoU%3D&reserved=0><http://api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=zdr5qxK5qpf1eQnAgeLmEPExPqBXf73sZq%2F3uaJHSoU%3D&reserved=0>> admin, how that works is that you can setup your domain to have a "website backend" which is where we route any non-API request to your domain. So, for example, if your APIs all live under https://developer.nps.gov/api/*<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdeveloper.nps.gov%2Fapi%2F*&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=MvBmv7L6P3uA6cvGA6sGX7ZIOQ%2FOQjYRKGKpdLGuyEw%3D&reserved=0> then https://developer.nps.gov/<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdeveloper.nps.gov%2F&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=wo6wJdkp%2BBqQksKGOkTd0sS4SctBBdQCuxAZs7FSAKQ%3D&reserved=0> could still serve up non-API traffic (a home page, documentation pages, etc). The website backend can point to a variety of types of servers where your website might live (and S3 bucket, GitHub Pages, or a CMS you run). https://developer.nrel.gov<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fdeveloper.nrel.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113

Nick,

Thanks again! I have a couple more questions :)

Is it possible to do a "redirect" to a backend? Say our API backend is api.nps.gov/api/<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.nps.gov%2Fapi%2F&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=DZ2GwDN4Mx5o7IZ3suwcduLAMbk43C%2B%2FwtwQJYJXF%2BA%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.nps.gov%2Fapi%2F&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=PypUkebA9ahVGsb0%2FKM28uxsGjoS8lXIO02PD3zwgXk%3D&reserved=0>, is it possible to make our website backend www.nps.gov/subjects/developer/<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.nps.gov%2Fsubjects%2Fdeveloper%2F&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=JYDfJoL0hOFqsu0%2F8xROV4ySbGEC80a4nB6iep0%2FHHc%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fwww.nps.gov%2Fsubjects%2Fdeveloper%2F&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=KbfP4G4X76HLscR2V%2FKRXgXXlfdBmyrjTNyfQQYx0AY%3D&reserved=0> or will we have to just create such a redirect at our origin? Not a big deal if we have to do the latter.

Also, I swear I read somewhere in the documentation that you could provide a list of data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fdata.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=aFAKvAP6rINLq98dsc60p10FOHahQCulo9F0%2B7%2B3u8g%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fdata.gov&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=S7oLJz3aPpKrTIvjJuZVSCmSzxa4c4DI0ACKJdGE%2FtQ%3D&reserved=0> IP addresses we can whitelist at our origin to only allow traffic from those? If so, could you provide that list?

I signed up for a CNAME domain (api-nps-gov.domains.api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi-nps-gov.domains.api.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=32LgTbRdJjkSqkKpVdi8zu3gSTIyRyD5CKrFpp3HZVU%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi-nps-gov.domains.api.data.gov&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=ty8e6VL3ZgieX32ytY2uqPhuIjzqAYzllMifKYDWGxE%3D&reserved=0>) from you guys for api.nps.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.nps.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=bxW%2B%2BQBtTsVrEOG2dgEXqXXMFwIlA8PoCEekeZv%2Fjy8%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.nps.gov&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=CMOFG1RX9SuuUE0G2wYc8kHLODEwd7zZM49fU5XfBhs%3D&reserved=0> to test all of this stuff out. Hi Billy,

Yes, by default anyone with an API key will be able to access your API. We have a signup form at https://api.data.gov/signup/<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fapi.data.gov%2Fsignup%2F&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=d5h1fNo%2BSQ87VcBQdBvvCCscn3k2vDWKwoBFzuMoUsU%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fapi.data.gov%2Fsignup%2F&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=E2oVERUmlzJBZViITWgI3i61NQLmuZ%2BdU8D5YQs9%2F88%3D&reserved=0>, but we usually recommend embedding the signup form on your own API documentation website: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#embedding-the-api-key-signup-form-on-your-own-documentation-site<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgithub.com%2F18F%2Fapi.data.gov%2Fwiki%2FUser-Manual%3A-Agencies%23embedding-the-api-key-signup-form-on-your-own-documentation-site&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5422671cc9594ac0b4d608d4f9e7113b%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636408218223301410&sdata=mdE7e%2B3AzMacxe3A5hZsaNrsQZlsYWzzcNZqjv4N2GM%3D&reserved=0><https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgithub.com%2F18F%2Fapi.data.gov%2Fwiki%2FUser-Manual%3A-Agencies%23embedding-the-api-key-signup-form-on-your-own-documentation-site&data=02%7C01%7Cnick.muerdter%40nrel.gov%7Cf3384c2205b74aac1f4c08d4f0ae20c2%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636398078062905377&sdata=StaTOxq7k%2FDRRIpQBHVTi3plx%2F9ZnvVoWAz8lXR5Ca4%3D&reserved=0>

If you don't want your API to be available to everyone, it's also possible to restrict access so that only certain API keys you grant explicit roles to can access your API.

Let us know if you have any other questions.

Thanks,
Nick

Thanks for your help Nick.

Is there anything I need to change on our GitHub page that loads the signup form? As far as variables or such?

Thanks,
Tony

Hi Memi,

The other thing you'll need to do is adjust the API key signup form on your page so that it also has e-mail verification enabled. Sorry this isn't more clear, but I've submitted a pull request that should take care of this: https://github.com/GSA/sam_api/pull/122

Let us know if you have any questions.

Nick

Good morning, all. I thought I added an email validation step to the API key sign up process for SAM on Wednesday, 10/18. I set it to established the transition period where current keys will continue to work, then require re-validation across the board.

I tested it this morning for my government account and for my personal email address. Both seemed to assign me an API key without any email validation. What did I do wrong?

Many thanks,
Memi

Good afternoon, Nick. I appreciate the advice. After further exploration of the metrics, your theory was correct. There are multiple instances of different API keys coming from the same IP Address (and not all of them look bogus). So, I set the per API key rate limit to 1,000 and the IP Address rate limit to 5,000/day. I also set the email authentication to the transition setting where new API keys must be email address verified and in a month, I will make all API keys require a verified email address. Did you get a chance to discuss reCAPTCHA?

Many thanks,
Memi

Hi Memi,

Yup, you're welcome to implement these changes whenever you'd like. And if you have any further questions, definitely feel free to get in touch, but the best contact address is api.data.gov@gsa.gov<mailto:api.data.gov@gsa.gov> (so the rest of the team gets the e-mail too).

And I think all of your steps sound good. I think the only question I had was regarding the per IP rate limit. Was it intentional that the 800 requests per day per IP was less than the 3,000 per day per API key? Typically, we actually see the reverse setup where the per-IP limit is higher than the per API key limit (to account for large corporate environments where many users might share a single IP). So with this IP rate limit, you might be effectively rate limiting most API keys (if they're coming from a single IP) to 800 requests per day. But this might be intentional depending on how your API keys are being used, that was the only thing I noticed.

Regarding adding a captcha to our signup process, we don't currently support that, but we have a team meeting tomorrow, so let me talk with them about, and we'll get back in touch about potentially including it in our roadmap.

Thanks,
Nick

Good afternoon, Nick. I wanted to thank you again for setting me up in the Admin Portal for api.data.gov/sam<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.data.gov%2Fsam&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636434371719870900&sdata=NWR1pt%2BRkCntyBoFZbDGOlemnjXW%2BHgyZKsUjFchIbY%3D&reserved=0>. I've designated three other admins and am getting concurrence to make the following changes:

1. Reduce the API call limit from 5,000 per key to 3,000 per key.
2. Establish a rate limit of 800 calls per day per IP address.
3. Require power users (i.e. any user wanting to make more than 3,000 API calls per key per day) go through a whitelist process by API key.
4. Add an email validation step to the API key sign up process.

After reading the user guide, I think we should be good to go when we implement those changes. May I contact you if I have any specific questions?

Also, what would I need to do to explore including the reCAPTCHA v2 API on the "Get an API Key" sign-up page?

Many thanks,
Memi

Some more details:

* Here's user guide/FAQ for doing things in the admin: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgithub.com%2F18F%2Fapi.data.gov%2Fwiki%2FUser-Manual%3A-Agencies&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636434371719870900&sdata=N7HsWeoxj7PjEJJPka1N4XBQOJpeVlOXUj97JzlDotA%3D&reserved=0>
* If you want to adjust the default rate limits for your API, see this section: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#setting-your-apis-default-rate-limits<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgithub.com%2F18F%2Fapi.data.gov%2Fwiki%2FUser-Manual%3A-Agencies%23setting-your-apis-default-rate-limits&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636434371719870900&sdata=xw9bqVkGSvDYG5t1VUt%2BPwzgfR7JfT565ctL5JmdL7A%3D&reserved=0>
* As I noted, you only have API key limits currently in place, so you may want to also add some IP-based limits too. This would appear to mitigate most of the current user's abuse (since it's all coming from a single IP).
* If you want to dig into the analytics, the Analytics > Filter Logs is probably your best starting point.
* There you can see the top users and the top IPs. If you drill into that top IP, you can see all the traffic comes from multiple API keys all under the same "me@patrickingle.info<mailto:me@patrickingle.info><mailto:me@patrickingle.info<mailto:me@patrickingle.info>>" e-mail address (we do allow multiple keys per e-mail address).
* You can disable specific API keys via the api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636434371719870900&sdata=e4oJZd%2F37Cq7Fs4z3wVmBkt6esylguDkJgVdWxUy3ks%3D&reserved=0><http://api.data.gov<https://na01.safelinks.protection.outlook.com/?url=http%3A%2F%2Fapi.data.gov&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636434371719870900&sdata=e4oJZd%2F37Cq7Fs4z3wVmBkt6esylguDkJgVdWxUy3ks%3D&reserved=0>> admin, or we can also block IP addresses on our end.
* If you would like to require that API users must verify their e-mail address first, there's a couple steps. I'm realizing this is something we don't have specifically documented, so I'll see about adding that, but the very quick version is that you would enable the "verifyEmail" option in your API key signup form (https://gsa.github.io/sam_api/sam/key<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgsa.github.io%2Fsam_api%2Fsam%2Fkey&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C6364344371719870900&sdata=nD1U%2FxaVAOTSFS4HpYNf2DQIBkYjJsio%2B2ctYEQb%2FE0%3D&reserved=0>, https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#embedding-the-api-key-signup-form-on-your-own-documentation-site<https://na01.safelinks.protection.outlook.com/?url=https%3A%2F%2Fgithub.com%2F18F%2Fapi.data.gov%2Fwiki%2FUser-Manual%3A-Agencies%23embedding-the-api-key-signup-form-on-your-own-documentation-site&data=02%7C01%7CNick.Muerdter%40nrel.gov%7C5d6c17b8b51a4080da1e08d511b067cc%7Ca0f29d7e28cd4f5484427885aee7c080%7C0%7C0%7C636434371719870900&sdata=j%2F2FGvGt8IQbm1SPzwXliDfzabaTBwwJsypt18CpbwI%3D&reserved=0>), and then in your API backend configuration, under Global Request Settings change the "API Key Verification Requirements" setting.

Title: Leak Valid API With out Verification -
Scope: https://data.gov
Weakness: Improper Authentication - Generic
Severity: Medium
Link: https://hackerone.com/reports/266449
Date: 2017-09-06 20:09:19 +0000
By: @(b) (6) Details:
Description
Remote attackers are able to retrieve a valid working api key with random Generation Process without a secure parsing or secure channel , human verification ..etc .
the current proccess for requesting any api key is with signup form , and message with api delivered privately to user , developer ..etc
so in this vulnerability any user can send alot of requests for any email with valid leaked api key .

Vulnerable module

[+] api-umbrella/v1/users.json

Vulnerable parameter

[+] options%5Bverify_email%5D

Proof of concept

1) goes to signup form https://api.data.gov/signup/
2) intercept the post data
3) change parameter value s%5Bverify_email%5D from True into false .
4) successfully reproduce it

poc logs

```

Timeline:
2017-09-06 20:34:24 +0000: @(b) (6) (group assigned to bug [team-only])
This is valid, but I'm not quite sure what API key is being generated. By capturing the request to signup for an API key located here (https://api.data.gov/signup/) and changing the parameter

verify_email from
true to
false, and API key is generated in the response:
{F218858}

Looks like he's able to bypass any email validation and create API keys on behalf of other email addresses that he doesn't have access to. Is this an intentional response?

2017-09-06 20:34:42 +0000: @(b) (6) (bug triaged)
Hey @(b) (6) -

Thank you for your submission. We have validated this issue and forwarded the report to the responsible team for this application. They will evaluate and let us know whether or not they will be implementing a fix.

Thanks!

2017-09-07 22:10:47 +0000: @(b) (user assigned to bug [team-only])
Another one for data.gov.

2017-09-12 21:49:09 +0000: @(b) (group assigned to bug [team-only])
-> data.gov, there's a group now.

Good afternoon, Nick. I can't thank you enough. I'm already logged into api.data.gov's Admin Portal and am amazed at the data available. I think a combination of things will be our path forward, but need to do some internal coordination first. Thank you for taking the time to talk with us today. Dave, thank you for setting up the call.

Many thanks,
Memi

Hi Meredith,

You should have access to the api.data.gov<http://api.data.gov> admin here: https://api.data.gov/admin/ You should be able to login with your Google GSA account, but let us know if you have any trouble getting in.

If you need any api.data.gov<http://api.data.gov> support, the best point of contact is api.data.gov@gsa.gov<mailto:api.data.gov@gsa.gov>.

Some more details:

* Here's user guide/FAQ for doing things in the admin: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies
* If you want to adjust the default rate limits for your API, see this section: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#setting-your-apis-default-rate-limits
* As I noted, you only have API key limits currently in place, so you may want to also add some IP-based limits too. This would appear to mitigate most of the current user's abuse (since it's all coming from a single IP).
* If you want to dig into the analytics, the Analytics > Filter Logs is probably your best starting point.
* There you can see the top users and the top IPs. If you drill into that top IP, you can see all the traffic comes from multiple API keys all under the same "me@patrickingle.info<mailto:me@patrickingle.info>" e-mail address (we do allow multiple keys per e-mail address).
* You can disable specific API keys via the api.data.gov<http://api.data.gov> admin, or we can also block IP addresses on our end.
* If you would like to require that API users must verify their e-mail address first, there's a couple steps. I'm realizing this is something we don't have specifically documented, so I'll see about adding that, but the very quick version is that you would enable the "verifyEmail" option in your API key signup form (https://gsa.github.io/sam_api/sam/key, https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#embedding-the-api-key-signup-form-on-your-own-documentation-site), and then in your API backend configuration, under Global Request Settings change the "API Key Verification Requirements" setting.
* You can manage other team member's access to the api.data.gov<http://api.data.gov> admin: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#adding-admins

I think we talked about some other options, and I know this is a bit of a whirlwind introduction, so

Subject: [18F/api.data.gov] Stop spam API key signups (#404)
Date: Thu, 05 Oct 2017 22:31:27 +0000 (UTC)
From: Nick Muerdter <notifications@github.com>
To: "18F/api.data.gov" <api.data.gov@noreply.github.com>
Cc: Subscribed <subscribed@noreply.github.com>
Message-ID: <18F/api.data.gov/issues/404@github.com>
MD5: 7ef72f800b8a5abeb761df21ab979df2

In the past day, there's been a large spike in API key signups, all of which appear to be generated by a spam bot.We have rate limits in place to prevent lots of API key signups from single IP addresses, but this bot seems to be utilizing many different IP addresses. So while our rate limits have helped (they blocked around around 120,000 signup attempts), the many different IPs have still been able to create many API keys (around 43,000 were created).

So far, none of the API keys have been used, so despite all the signups, we haven't seen any other abnormal API traffic. Based on the content of the signup submissions, this looks more like a comment spam bot (the submitted form contains various links and URLs), rather than anything specifically after API keys.

On Thu, Oct 5, 2017 at 6:40 PM, Muerdter, Nick <Nick.Muerdter@nrel.gov> wrote:
Hi,

This should be resolved, but we'll continue to monitor things.

It appears like this was just a comment/spam bot that started targeting our API key signup form. However, they weren't actually using any of the API keys, so there doesn't appear to be any abnormal API traffic as a result of this. We've added some measures to prevent these spam submissions, and removed these invalid signups from today. There's a bit more detail here: https://github.com/18F/api.data.gov/issues/404

Thank you for the heads up about this! Let us know if you have any further questions or concerns.

Nick

Hi Memi,

The other thing you'll need to do is adjust the API key signup form on your page so that it also has e-mail verification enabled. Sorry this isn't more clear, but I've submitted a pull request that should take care of this: https://github.com/GSA/sam_api/pull/122

Let us know if you have any questions.

Nick

Good morning, all. I thought I added an email validation step to the API key sign up process for SAM on Wednesday, 10/18. I set it to established the transition period where current keys will continue to work, then require re-validation across the board.

<image.png>

I tested it this morning for my government account and for my personal email address. Both seemed to assign me an API key without any email validation. What did I do wrong?

<image.png>

Many thanks,
Memi

(adding Alexandre)

Hi folks,

Thanks a bunch for reaching out. We'd love to hop on the phone and connect with you about more of this. I think there's two fronts:

API Documentation

We're phasing out where we host the web documentation for other agencies' APIs, but I'm happy to hop on the phone and offer some guidance of how to do it one of these ways:

> on a page like there exists for the recalls API
> On a github page, like GSA does - you can see a lot more examples of federal agencies doing this here. It'd free and not hard for CPSC to do it and it's far and away what I would recommend. I'd be happy to help set this up with you and show you how you can maintain

it.

API analytics and keys

Separate from that though, we'd love to encourage you to use the actual api.data.gov service for the new API, to manage API keys and provide you with analytics on who is using your API and how. I know that we've connected on this in the past but is this a new API?

Regardless, thanks for getting in touch. Would you by chance want to chat sometime tomorrow (Wed.) afternoon or sometime early next week (I'm out Thursday and Friday)?

Gray

Subject: Using api.data.gov's services for my agency's APIs

Hi, I am a developer, working on a api project for my client, CPSC, a government agency. The project has almost finished, and now there is a question, How to publish a document link like what is under "Web Service Documatation" column in https://api.data.gov/ page. I wonder if I got the admin account, can I publish the document by myself and how if I can or I need to contact you to publish the documentation link. Thanks!

MD5: c8c71f8362e24d302d0840082d0d19e3

This should be fixed now. The full backlog of e-mails has also been sent out (so any users that signed up in the past week and didn't get an e-mail should have just gotten one).Sorry for the trouble, but thanks to everyone for alerting us to the issue.

@gbinal: This was also catching the support e-mails to us, which of course are people saying they didn't receive their e-mail. Oops. :(They should have received their API key, but I'll also respond to all those support e-mails.

For more technical details on what caused this, we made a security fix last week that changed one of our internal configuration settings for the default hostname of our system. This inadvertently broke our ability to send outgoing e-mail since without this default hostname setting, the e-mails we sent were coming form "noreply@localhost" instead of "noreply@api.data.gov." AWS SES was rejecting these localhost e-mails since they were from an unknown domain. So the fix to set an explicit hostname just for the e-mails was relatively straightforward (18F/api.data.gov-ops@52c237f), it's just unfortunate we didn't catch this earlier.

One thing we could do to better track this would be to setup monitoring around our e-mail queue size, and if failures grow in the queue, that's probably a good sign that our outbound e-mails are failing. We're in the midst of some broader system changes for the api.data.gov platform, so I'm not sure it makes sense to setup this monitoring now (since how we would monitor things will change), but I think we can definitely try to get better monitoring setup around this once we migrate our systems.

@LindsayYoung: Oh, and a slight tangential note, but to clarify the mystery around the user having their account ID, but not an API key: We always create the API key and account immediately on signup, but if the account requires e-mail confirmation (as the default api.data.gov/signup page does), then we do not display the API key to them immediately. Instead, we only include the key in the e-mail to them, so effectively they have an account, but they can't use it until they receive the e-mail with the key. However, we do display the account ID to them on the signup confirmation screen for support purposes, so this is how someone could know their account ID, but not their key. Hope that clears up the mystery.-

Thanks for the heads up, and sorry for the problems!@gbinal, @LindsayYoung: I'm deploying a fix shortly. Any preferences on whether we deliver the backlog of messages that failed to be sent earlier? We stopped sending e-mails on 8/31, so if we deliver the full backlog, some users might wonder why they're suddenly getting a signup e-mail a week late, but everyone would get their keys.

Hi all,

I think some colleagues at GSA and 18F had already been in touch this evening about some of the file uploads allowed via the API (which is perhaps a known issue, but making the rounds on Twitter: https://twitter.com/h3apspray/status/903044975813771264).

I hate to pile on, but I also happened to notice that I can bypass the API key requirements and rate limits provided by the api.data.gov<http://api.data.gov> service, and access your API directly. Perhaps you were already aware of this, or this setup is intentional, but I just thought I'd give you a heads up, since it seems like there's always a lot of interest in people poking around this API.

As a quick example of what I mean, here's an example request requiring an API key form your documentation (and that will be rate limited by api.data.gov<http://api.data.gov>): https://publicapi.fcc.gov/ecfs/filings?api_key=DEMO_KEY&limit=20&q=14-28&type=autocomplete_open But I can also make the same request directly to your API backend without any API keys (and possibly without rate limits, unless your API backend is also doing rate limits): https://ecfsapi.fcc.gov/filings?limit=20&q=14-28&type=autocomplete_open (and seems like the ecfsapi.fcc.gov<http://ecfsapi.fcc.gov> domain is known, so this might be discoverable by external people).

Here's some additional documentation on potential strategies to secure your API backend if you want to ensure that the traffic is first routed through your publicapi.fcc.gov<http://publicapi.fcc.gov> domain with the api.data.gov<http://api.data.gov> service: https://github.com/18F/api.data.gov/wiki/User-Manual:-Agencies#securing-your-api-backend

But again, this setup might be intentional for various reasons, but I wasn't sure, so I just wanted to notify you.

Feel free to reach out if you have any other questions or we can help with anything from api.data.gov<http://api.data.gov>'s end.

Thanks,
Nick

We were running a big low on disk space due to extra log traffic (but nothing too dire since these alerts are tuned to be sent out with quite a bit of warning).

I've expanded the disk slightly and removed some of the log data we don't need to temporarily resolve this. But I'll circle back to this tomorrow, since I'd like to make some further adjustments in our logging (basically we have a user that we've blocked, but their blocked traffic still ends up generating a lot of log data we don't really care about).

Nick

Hi (b) (6)

Sorry for the delay in getting back to you. After digging into this, I realized that my confusion stemmed from the fact that the api.census.gov team does not employ the api.data.gov service for its API keys.

In order to get in touch, it looks like you should either engage in the developers forum or email the person listed at the bottom of the Contact Us page.

Sorry to not be more directly helpful, but good luck!

Gray B.

Something appears to have gone awry with rsyslog's memory growing indefinitely since I rolled out the last API Umbrella package update yesterday. I restarted rsyslog to get things back to normal, but I'll dig in more tomorrow. Luckily this alert helped catch things before we ran out of memory, so there has not been any impact on the service.

Hi folks,

I apologize for the slow response on this over the last few weeks. With the new leadership, we've been reorienting a number of our programs in a good but distracting way over the past few months.

If it's still useful, there's two fronts we'd be happy to connect on. First off, we're definitely happy to talk in general about how you manage your APIs' access.

But also, yes - GSA offers an API key solution as a shared service, that is used by about 25 programs across 15 agencies and that people tend to be happy with. It allows you to manage access to your APIs through keys that can be at any number of usage tiers (e.g. so you could have a general access public tier for piloting; privileged tiers for select, high-volume users; a restricted regime that only grants access to those you whitelist, etc.). It's very lightweight and easy to set up, so you can see if you like it very easily.

Let me know if you'd like to hop on a call with us and we can share more details about it, answer any questions you have, and grant you access to the service.

Gray B.

On Tue, May 30, 2017 at 3:09 PM, Crobak, Joe R. EOP/OMB <Joseph_R_Crobak@omb.eop.gov> wrote:
Hi Gray,

We're working on a project at CMS in which we're partnering with third parties to submit data (and ultimately receive feedback) for the Quality Payment Program (see some of our docs at https://qpp.cms.gov/resources/developers?). While some of our APIs are public, we need to restrict usage to others to only trusted third parties. We were hoping you might have some advice or lessons

learned from similar programs. Also, I'm not so sure it'd be appropriate, but I thought I'd ask if data.gov might have a roll to play in this too (e.g. with API credentials?)

In any case, if you have some time to chat next week to provide any guidance, that'd be great!

Thanks,

Joe

I believe I've tracked down the underlying issue that caused this issue, and have addressed it so it shouldn't crop up again.Some more details if you're interested:

Timeline of what happened

Here's an bit more detail of what happened, and the events that might have been related:

- On May 31, I deployed an update to the servers to allow for handling SSL for a new agency subdomain (18F/api.data.gov-ops@bcf89d5).
- On June 1 at 12:15PM ET, 1 of our servers stopped handling SSL requests. SSL requests hitting this server would seem to hang indefinitely.
- I SSHed into the box to try to figure out what was going on. After identifying that it was the SSL layer that was hung, but not seeing any obvious causes, I went for the old restart approach, and tried restarting the nginx process that handles SSL.
- However, upon trying to restart nginx, nginx stopped, but then failed to start back up again. Instead, nginx wouldn't start because it kept saying something else was already listening on its ports. I identified that the "sockproc" process (used by our SSL handling) was somehow listening on nginx's ports, so I killed sockproc, and restarted nginx.
- nginx then successfully came back online, and service was fully restored at 12:25PM.

So during the 12:15PM-12:25PM time frame, some requests were failing, but only ones that landed on this 1 problematic server. I think the 1 bad server may have also started to get removed from load balancing rotation (particularly once I had stopped nginx completely and it wasn't starting back up), which would have lessened the impact (since then more traffic should have been getting routed to the good server). So for a very loose ballpark, I think during this 10 minute period, maybe 1/4-1/3 of requests to us failed.

What caused the outage

Why 1 of our servers began hanging when serving up SSL requests is a strange one. I'm not 100% sure I've reproduced the exact scenario that took things down on June 1 (since I think we hit a pretty rare edge case that is hard to reproduce), but I was able to reproduce the fundamental issue. Here's what I found:

- At first, I tried re-running some of the traffic that was hitting our server at the time (there were some SSL scanning tools hitting the server at the time, which stood out, but are really fairly normal). However, despite barraging a test server with traffic and SSL scans, I couldn't replicate the problem.
- I then shifted towards looking into why the "sockproc" process was preventing nginx from starting up after I had stopped nginx, and that's where I had more luck. I found that if I explicitly restarted nginx in a certain way, I could reproduce the issue of sockproc taking over nginx's sockets and preventing nginx from starting again.

So the issue gets into the specifics of how we use lua-resty-auto-ssl to handle SSL and how it works internally, but sockproc taking over nginx's sockets is actually an issue we've seen before, but should have been addressed. However, it turns out that there was an esoteric bug in the original fix that hinged upon what current directory you were
cded into when you first started or restarted nginx. If you were
cded to a directory that the nginx worker user didn't have permission to (like your personal home directory), then "sockproc" would end up inheriting nginx's sockets. By inheriting nginx's sockets, when nginx was stopped, sockproc take over trying to respond on nginx's ports. sockproc obviously can't respond to anything on those ports (since it's not a web server), which would then lead to the appearance the server was alive (something was still accepting connections on the port), but hung (since you'd never get a response).

The only part of this that doesn't add up completely, is that I was only able reproduce nginx hanging when I triggered a restart of nginx (where by nginx stopping, sockproc would take over listening on its ports). However, in our situation, nginx got reloaded the previous day (after the deployment of the new configuration), but then shouldn't have been touched at all on June 1st. So I'm not completely sure what would have caused nginx to suddenly stop responding during the middle of the day. My theory is that we hit some edge case that either caused nginx to reload on its own, or something else happened which allowed sockproc to take over nginx's sockets (since they were always being inherited by sockproc, it just hinged upon sockproc taking them over for them to become active and then start causing problems).

So again, while I wasn't able to completely reproduce this issue in the sporadic way that it occurred, I was able to reproduce very similar behavior with more explicit commands (nginx appearing up, but hung/not responding, and then nginx not being able to start again due to sockproc already listening on its port). So it seems like this inherited socket issue is likely the culprit.

The fix

While all of this functionality is buried in the inner workings of our SSL setup, the fix is relatively straightforward: Make sure sockproc really drops the inherited file descriptors from nginx (as we had always intended).

Since the bug only cropped up depending on the permissions of where the user was
cded to, then before starting sockproc we now
cd / to ensure the script will have permissions to execute. We've also removed the underlying culprit causing the permission issues (it was due to a shell call to
basename), and we've also added more redundancy to better ensure the file descriptors are always cleared. Tests have also been added to ensure sockproc is only listening on the expected sockets.

It's outlined in a bit more detail here: GUI/lua-resty-auto-ssl#75

Hi
Here find the excel name:

Village/Locality Based Pin Mapping As On 16th March 2017

So I need that excel API key.
More over let me know majority excels have request api key mentioned why???

Please let me know and how to get api keys for those sheets

Thanks

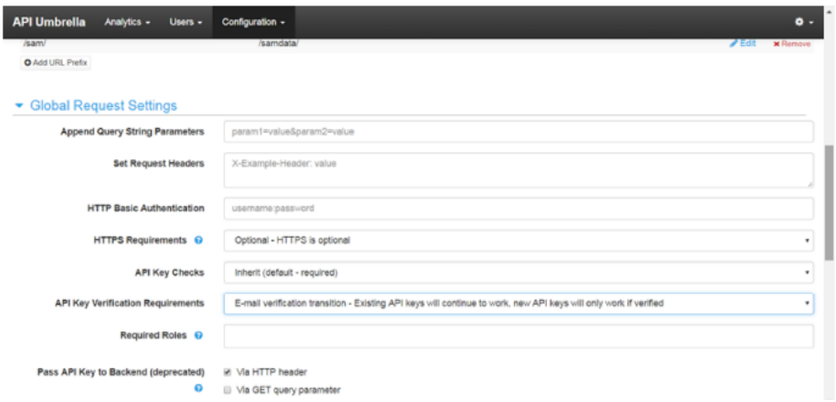
Good morning, all. I thought I added an email validation step to the API key sign up process for SAM on Wednesday, 10/18. I set it to established the transition period where current keys will continue to work, then require re-validation across the board.



I tested it this morning for my government account and for my personal email address. Both seemed to assign me an API key without any email validation. What did I do wrong?

Many thanks,
Memi

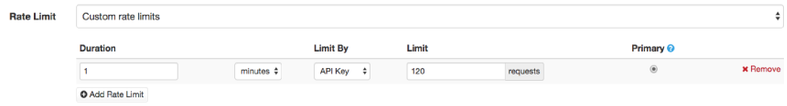
Hello Gray!

This is actually something I have been meaning to follow up on! In the API dashboard it looks like I have set the default limits to 120 a minute, but the keys are still defaulting to 1000 an hour.



I will set this person's key manually. Thanks again!

Subject: Questions on the use of the FEC API

I'm experimenting issues with the FEC API using the
https://api.open.fec.gov/v1/schedules/schedule_a endpoint.

Any help you could provide on these issues would be much appreciated:

- I have registered for a personal API Key (b) (4)), yet I still seem to be subject to the 1000 requests per hour limitation instead of 120 per minute
- To limit the data I get back I would like to either:
  - Query by 5 digit zip and have it match 9 digit zip codes as well
  - Query by last name and require that it be an exact match

Thanks,

(b) (6)

To put it another way Gray, you're suggesting they go ahead and post their internal APIs to the external API directory with a note they are internal. And have a public github repo for the doco using the API template.

I don't have any objections to that, and that's actually what is currently stated in the API standards and totally legit. That would definitely have a lot of value for sharing information about their APIs.

Longer term (3-6 months?), I would also like to see us work toward an internal API directory, but don't want to hijack the thread on that topic.

On Mon, Aug 28, 2017 at 3:02 PM, Gray Brooks <gray.brooks@gsa.gov> wrote:

Hi folks,

I just want to add a belated follow up to this conversation. First off, yes to everything Ryan said.

But the other thing I'll throw out there that I think will serve us well would be this - even for internal APIs:

> use the GSA API documentation template for the API documentation (not a word doc or pdf that's circulated or a page on insite)
>
> have it be available publicly (examples here and here)
> and link to it from the GSA api directory that we already have and use on open.gsa.gov

In the documentation, you can make clear who the intended users are (which you should be doing anyway) and it's fine for that audience to just be internal to GSA. You can use the api key setup you have to manage access just the same, granting access to your API only to those you want to grant access. There should be no security concern to your API docs being publicly available, if there is, something else is wrong.

But in the meantime, your API docs will be wayyyy more findable to those who you want to find them. And it's not a defect, but rather a proactive positive step for 3rd party developers to better understand how we work internally.

Happy to expand on this more and/or help the DSS team create a new repo and stand up the api docs, but to me, this is all win and no loss.

Hi Neel,

I am not 100% certain what you're requesting regarding next steps. If you are asking to have an API directory available prior to a GSA management meeting, I am afraid that is not realistic.

If you would like to have someone test your service through api.gsa.gov, I would be happy to give it a shot.

Hi Gray,
I was finally able to get the api.gsa.gov ip addresses white listed on the server.
Also I was able to successfully access the DSS url.

I will go ahead and do some more tests on it.

Thank you,
Sudhangi

On Thu, Jun 29, 2017 at 1:52 PM, Gray Brooks <gray.brooks@gsa.gov> wrote:

Alright - thanks for following up on this.

Sure enough, it does look like we would need to whitelist the IP addresses for the api.data.gov service (54.208.160.112 and 54.208.160.151) since it lives outside of the GSA internal network.

Are you able to do that specifically with your application or do you think we'll have to submit a helpdesk ticket and get GSA IT to help with it?

If anyone else has any thoughts on how to allow the connection to the DSS API from outside the internal network, do speak up.

Also, just to check, is there an abject need for the API to stay inside the network? If not, another option would be to make it available outside the network, block all access except through the api.data.gov IP addresses and change its settings so that only api.data.gov keys that you specifically white list will be able to access the API.

Gray

```
{

Hello Everyone,
good afternoon.
As discussed yesterday, please find below a link that has documentation for one of our APIs. The documentation includes a sample soap ui project and the endpoint.
NOTE: The endpoint presently does not have the GSA recommended naming convention but we've that implemented and soon will be released.
https://docs.google.com/document/d/1us2UAX1v_DtumgnlSVfetTBxNqLK3CSDYUrINlIE25c/edit

On Thu, Jun 29, 2017 at 1:52 PM, Gray Brooks <gray.brooks@gsa.gov> wrote:

Alright - thanks for following up on this.

Sure enough, it does look like we would need to whitelist the IP addresses for the api.data.gov service (54.208.160.112 and 54.208.160.151) since it lives outside of the GSA internal network.

Are you able to do that specifically with your application or do you think we'll have to submit a helpdesk ticket and get GSA IT to help with it?

If anyone else has any thoughts on how to allow the connection to the DSS API from outside the internal network, do speak up.

Also, just to check, is there an abject need for the API to stay inside the network? If not, another option would be to make it available outside the network, block all access except through the api.data.gov IP addresses and change its settings so that only api.data.gov keys that you specifically white list will be able to access the API.

Hello again Nick,

We got a request for a rate limit increase from a user recently. When I looked them up, she had 3 api keys under her email address (b) (6) @gmail.com<mailto(b) (6) @gmail.com>. However, after further digging, it appears this same user also has 4 accounts through her (b) (6) @fiscalnote.com<mailto(b) (6) @fiscalnote.com> address as well. When I run the analytics report, the unique users appears to be based on the email address – so it only appears to show 2 accounts. Is there any way to more clearly illustrate the unique user-id or api-key?

Also, I was hoping to figure out a way to identify requests from the same IP using multiple accounts – any reasonable way to do that?

https://api.data.gov/admin/#/stats/logs?date_range=7d&interval=hour&query=&search=user_email%3A%20(b) (6) *

Alright - thanks for following up on this.

Sure enough, it does look like we would need to whitelist the IP addresses for the api.data.gov service (54.208.160.112 and 54.208.160.151) since it lives outside of the GSA internal network.

Are you able to do that specifically with your application or do you think we'll have to submit a helpdesk ticket and get GSA IT to help with it?

If anyone else has any thoughts on how to allow the connection to the DSS API from outside the internal network, do speak up.

Also, just to check, is there an abject need for the API to stay inside the network? If not, another option would be to make it available outside the network, block all access except through the api.data.gov IP addresses and change its settings so that only api.data.gov keys that you specifically white list will be able to access the API.

chat api.data.gov and digital signature APIs

Hi Neel,

Thanks for getting in touch. That's great news - the more that GSA is building and dogfooding APIs, the better!

To your question, yes - api.data.gov is very possibly a good fit for you and we've already got it set up for programs in GSA to use. I'm looping in the team and am happy to set up a hangout for us to fill you in more about the service.

Gray

A couple of ideas:

- Your team could send out an announcement to the apis@gsa.gov, which will reach the developers.

- Add an item in the GSA IT Around the Horn

- GSA news brief or Insite update

- Volunteer to present the new API at the quarterly API working group meeting in the fall

Hope this helps!

Hi Gray,

Good Morning

One quick question:

Now that we've our APIs routing via data.gov, the question we have is around making our API searchable and available in the the API catalog.

Please point us to some documentation around that.

Thanks & regards,

Hi Neel,

You'll want to include the API key signup form in your documentation (assuming it's as webpage). To interact with the analytics dashboard, you'll want to log in at api.data.gov/admin (you should all have accounts). Most of the other agency tasks are further documented here.

If it'd be helpful to hop on a quick 30 minute call to go through these and other tasks, let me know some good times for you and your team and we'd be happy to connect.

Hi,

This should be resolved, but we'll continue to monitor things.

It appears like this was just a comment/spam bot that started targeting our API key signup form. However, they weren't actually using any of the API keys, so there doesn't appear to be any abnormal API traffic as a result of this. We've added some measures to prevent these spam submissions, and removed these invalid signups from today. There's a bit more detail here: https://github.com/18F/api.data.gov/issues/404

Thank you for the heads up about this! Let us know if you have any further questions or concerns.

Hi,

This should be resolved, but we'll continue to monitor things.

It appears like this was just a comment/spam bot that started targeting our API key signup form. However, they weren't actually using any of the API keys, so there doesn't appear to be any abnormal API traffic as a result of this. We've added some measures to prevent these spam submissions, and removed these invalid signups from today. There's a bit more detail here: https://github.com/18F/api.data.gov/issues/404

Thank you for the heads up about this! Let us know if you have any further questions or concerns.

Nick

Hi Neel,

You'll want to include the API key signup form in your documentation (assuming it's as webpage). To interact with the analytics dashboard, you'll want to log in at api.data.gov/admin (you should all have accounts). Most of the other agency tasks are further documented here.

If it'd be helpful to hop on a quick 30 minute call to go through these and other tasks, let me know some good times for you and your team and we'd be happy to connect.

Gray

Hi Gray,
I was finally able to get the api.gsa.gov ip addresses white listed on the server.
Also I was able to successfully access the DSS url.

I will go ahead and do some more tests on it.

Thank you,
Sudhangi

On Thu, Jun 29, 2017 at 1:52 PM, Gray Brooks <gray.brooks@gsa.gov> wrote:

Alright - thanks for following up on this.

Sure enough, it does look like we would need to whitelist the IP addresses for the api.data.gov service (54.208.160.112 and 54.208.160.151) since it lives outside of the GSA internal network.

Are you able to do that specifically with your application or do you think we'll have to submit a helpdesk ticket and get GSA IT to help with it?

If anyone else has any thoughts on how to allow the connection to the DSS API from outside the internal network, do speak up.

Also, just to check, is there an abject need for the API to stay inside the network? If not, another option would be to make it available outside the network, block all access except through the api.data.gov IP addresses and change its settings so that only api.data.gov keys that you specifically white list will be able to access the API.

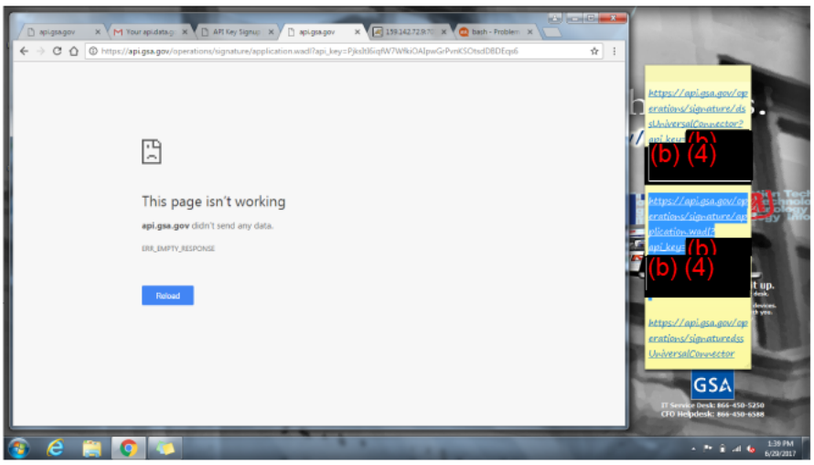
Hi Gray,
I tried accessing the new url after I got an API key from api.data.gov.
The original URL works just fine:
http://159.142.72.9:7070/DSS-API/service/application.wadl

But the new url gives me the following error page:
https://api.gsa.gov/operations/signature/application.wadl?api_key=PjksItI6iqfW7WfkiOAIpwGrPvnKSOtsdDBDEqs6



Any idea why would this happen?

Thanks,
Sudhangi

chat api.data.gov and digital signature APIs

Hi Neel,

Thanks for getting in touch. That's great news - the more that GSA is building and dogfooding APIs, the better!

To your question, yes - api.data.gov is very possibly a good fit for you and we've already got it set up for programs in GSA to use. I'm looping in the team and am happy to set up a hangout for us to fill you in more about the service.

Hi Neel,

I am not 100% certain what you're requesting regarding next steps. If you are asking to have an API directory available prior to a GSA management meeting, I am afraid that is not realistic.

If you would like to have someone test your service through api.gsa.gov, I would be happy to give it a shot.

Hi Ryan,

The outstanding technical blocker right now is that the "cf service-connect" is not available for use on GSA GFE machines, due to GSA policy. I believe the ball is in Bret Mogilefsky's court to get that resolved.

It certainly is, to my shame. :(Buying certs for this is confusing; going to ask for more help with this.

Here are some technical topics on our radar, so anything you could share on those ahead of time would be great:
- Sending emails from cloud.gov app

We don't yet offer a brokered transactional mail service, though we hope to in future. For now talking to GSA IT about the SMTP Relay option is probably your best bet.

- Controlling login to web app (SecureAuth/SSO)

This one's pretty easy... We offer a service that makes our own authentication federation available to your app via OAuth:
https://cloud.gov/docs/apps/leveraging-authentication/

- Authentication for REST API (OATH, etc).

You might want to use api.data.gov which provides other features (rate-limiting, documentation, analytics, etc) in addition to handling issuance of API keys.

Regards,
Bret

Hi Britta,

Thank you for checking in and sending additional resources. We have made steady progress getting different pieces of a shell application up and running using .NET CORE 2.0/Cloud.gov/PostgreSQL. It's nothing fancy, but we're learning a lot about cloud, 12Factor, etc.

If you're interested, you can see our repo here:

https://github.com/GSA/CorpIT-CloudSandbox

>>What else can we do to support you in evaluating cloud.gov? Let's set up a time to talk more - can we set up another discussion in a couple weeks?

Thanks, that would be good. Why don't we shoot for the week of Nov 6, as I'll be on travel a bit in the coming weeks. You can look at our calendars (me + Billy, Will, Jason, Leo).

>>We're always curious to learn more about your experience, including if you're running into any technical or other blockers.

The outstanding technical blocker right now is that the "cf service-connect" is not available for use on GSA GFE machines, due to GSA policy. I believe the ball is in Bret Mogilefsky's court to get that resolved.

Another tricky one was pulling the PostgreSQL database credentials out of the Cloud.gov environment variables, but we were able to find some sample code that parsed the JSON in the VCAP_SERVICES variable and we got past that one.

Upcoming topics:

Here are some technical topics on our radar, so anything you could share on those ahead of time would be great:
- Sending emails from cloud.gov app
- Controlling login to web app (SecureAuth/SSO)
- Authentication for REST API (OATH, etc).

We look forward to talking more,

Hi Ryan,

Thank you for attending the recent cloud.gov workshop; I hope you found it useful. We finally put together follow-up resources from the meeting we had in September - I hope these are helpful too.

What else can we do to support you in evaluating cloud.gov? Let’s set up a time to talk more - can we set up another discussion in a couple weeks? We’re always curious to learn more about your experience, including if you’re running into any technical or other blockers.

.NET Core apps for cloud.gov

These are the sample apps included in the .NET Core buildpack itself, maintained for testing

the buildpack: https://github.com/cloudfoundry/dotnet-core-

buildpack/tree/master/cf_spec/fixtures

Jeff Fredrickson made this sample app for use with cloud.gov:

https://github.com/jfredrickson5/dotnet-core-poc

Here are also a few more sample apps at varying levels of complexity and maintenance - they

may need some adaptation but may be interesting in some way:

https://github.com/cloudfoundry-samples/dotnet-core-hello-world (see

https://github.com/cloudfoundry-samples/dotnet-core-hello-world/issues/2 - where I wrote down a fix

for a minor problem I ran into when trying this sample app)

https://github.com/IBM-Bluemix/aspnet-core-helloworld

https://github.com/IBM-Bluemix/get-started-aspnet-core

https://github.com/IBM-Bluemix/aspnet-core-todo

Accessing your database instance directly

|

To access a database (https://cloud.gov/docs/services/relational-database/#manually-access-a-

database) you can use service connect: https://github.com/18F/cf-service-connect.

|

Additionally the SSH command (https://cloud.gov/docs/apps/using-ssh/), lets you securely log in to an

application instance where you can perform any debugging, environment inspection, and other tasks.

Thank you,

Britta

Subject: management things while I'm out
Date: Mon, 3 Jul 2017 16:31:02 -0400

Hi Shashank,

I expect none of these to be problems but wanted to call out the sorts of things I'm checking regularly:

- check in with David Warren on how his fugacious market research stuff is going (he should give updates in standup). David should be able to attend most meetings in my place, but you and Josh can alter that if needed.
- David should run the P&P weekly meeting. Bailes can let you know if there's anything in SMT worth sharing out with the team while they are together in a meeting.
- For cloud.gov sales:
  - More use cases for more CIOs - consider paragraph blurbs of what other agencies have done
    Consider searching FedBizOpps for web/cloud buys to better understand our federal market
  - Keep John K and GSA OGR in the loop with efforts (sync'd with outreach) so that we can be more hill exposure if desired.
  - Shive suggested that OAI wants more tangible delivery: systems that soft launched, for example last week, like seedfund.nsf.gov with Federalist.
- For data transfer or Federalist as offerings of cloud.gov (following up on our Friday covnvo
  - think about how you'd want to charge for these types of SaaS offerings that are built on cloud.gov, where there's less flexibility but more out-of-the-box use
  - pricing model needs to enable overall cost recovery but can be set more flexibility than the economy act.

Things to monitor:

- watch #eregs-atf channel and make sure that engagement kicks off well (I'm sure it will)
- monitor Gray / OPP convos with api.data.gov; if that path is non-viable Gray needs to pivot or spin down api.data.gov
- make sure no one is getting unhappy in #federalist-support
- Keep track of any TTS strategy convos/org developments; want to avoid the team being blindsided without exporting stress to them.

I'm sure stuff will come up that requires some judgment calls.; thank you for helping out!

-Will

David, thanks for reaching out!

Alan DeLevie is the system owner for **micropurchase**. Alan, there is a High severity security finding for micropurchase and it needs to be addressed within 30 days, you can see details in the attached document. Is micropurchase set to be decommissioned within 30 days?

Amy Lawson is the system owner for **cap.18f.gov**. Amy, we can talk about the findings in the attached document.

Amos Stone is the system owner for **fugacious.18f.gov**. Amos, see the security findings in the attached document.

Will Slack is the system owner for **federalist**, though Will there are no findings.

Holly

On Mon, Jul 31, 2017 at 7:38 PM, David Olson - IST-C <david.olson@gsa.gov> wrote:

Hi Holly,

I'm not sure who the assigned System Owners are for the following systems so I was hoping you could point me in the right direction. Those systems include cap.18f.gov, Fugacious, Micropurchase, Tock, api.data.gov, and Federalist 1.1.

CAP: There are thirty-one (31) Medium findings related to Cookie Security: Cookie Not Sent Over SSL (4720) and Insecure Transport: SSLv3/TLS Renegotiation Stream Injection (10942).

Fugacious: There is one (1) Medium finding related to Insecure Transport: SSLv3/TLS Renegotiation Stream Injection (10942).

Micropurchase: There is one (1) High finding related to Web Server Misconfiguration: Unprotected File (11405). I know this system is planned for decommission but until that is complete any findings must be remediated.

TTS-Tock	TTS-Tock	https://tock.18f.gov/	Clean Scan
TTS-Federalist 1.1	TTS-Federalist	https://federalist.18f.gov/	Clean Scan
TTS-api.data.gov	TTS-api.data.gov	https://api.data.gov/	Clean Scan

Per GSA IT Security Policy 2100.1, Critical and High findings need to be remediated within thirty (30) days and Moderate findings within ninety (90) days.

If you have any questions or concerns, please let me know.
